

Example of Cost Savings

Mary's doctor at MHG Physician Clinic prescribes two (2) formulary brand prescriptions for her every month. She usually gets them from the big-box store pharmacy where she shops.

Both drugs are formulary brands and her copay at a regular retail pharmacy is \$25.00 per month, per prescription.

Formulary Brand #1—\$25 co-pay / 12 times per year = \$300.00.

Formulary Brand #2— \$25 co-pay / 12 times per year = \$300.00

TOTAL ANNUAL COST: \$600.00

Since her doctor is an MHG employed provider, Mary could use an enhanced pharmacy for added savings and also save time if she gets 90 days of each prescription. **(Can utilize mail order.)**

Formulary Brand #1—\$12.50 co-pay / 4 times per year = \$12.50 x 4 = \$50.00

Formulary Brand #2— \$12.50 co-pay / 4 times per year = \$12.50 x 4 = \$50.00

TOTAL ANNUAL COST: \$100.00

In one (1) year Mary would save **\$500.00** on just two (2) prescriptions (**\$600.00 — \$100.00 = \$500.00**)
